DIRA Website Development Brief

Prepared for: Development team Reference: Strategic Plan 2026–2035 v5.0, Operational Plan 2026 v7, live site audit (diracmr.com and connected properties)

This document replaces the two earlier audit files. Read it in full before starting work.

Every item below is marked **[MANDATORY]** or **[OPEN]**. Mandatory items are fixed requirements: factual errors, broken functionality, or corrections tied to the Group's actual legal and brand identity. Open items are direction, not instruction: a recommended structure or approach, with room for your own judgment on naming, layout, and implementation. Where something is open, that's stated explicitly. Everything else is mandatory.

---

0. Brand Name Correction (Read This First)

[MANDATORY] The company's name is **DIRA**. Not "DIRA Digital Era," not "DIRA Tech Solutions," not "Dira Digital Era" in the site's contact email. DIRA is the full operating name, used everywhere: navigation, logo, page titles, footer, email addresses, meta tags.

"Digital Era" is what the name stands for, not a second word attached to it. That explanation belongs in exactly one place: a short line on the About page, something like *"DIRA stands for Digital Era."* It does not belong in the site's title tags, the footer copyright line, or the contact email address.

Fix every instance found on the current live site:

- Title tags currently read "DIRA Tech Solutions": change to **DIRA**.
- Footer currently reads "DIRA- Birth of the Digital Era": change to **DIRA**, with the "Digital Era" explanation living only on the About page.
- Contact email currently uses `diradigitalera@gmail.com`: replace with `info@diracmr.com` (see Section 3).

This applies across every DIRA-owned property, not just the main site: diracmr.com, foundation.diracmr.com, and any others under direct DIRA ownership.

---

1. What DIRA Actually Is

DIRA is a Bamenda-based, multi-sector conglomerate, registered as a Société par Actions Simplifiée Unipersonnelle under the OHADA Uniform Act, one hundred percent founder-owned. The Group is structured around ten pillars. Two are live and public-facing today: **DIRA** itself (the digital services core) and **DHUB** (the housing marketplace). The rest are in earlier stages and are not the website's concern for this pass, do not build pages for pillars that have no public-facing activity yet.

The current live site presents DIRA as a small, generic web agency. It is not that. It is the operating core of a group structure with a live product (DHUB), a philanthropic arm (DIRA Foundation), an annual flagship event (DIRA TechFest), and a content production facility (DIRA Content Studio) already generating revenue. The website's job is to make that structure legible to anyone who lands on it, an institutional partner, a government office, an investor, without overstating anything that isn't real yet.

---

2. What DIRA's Digital Services Actually Are

Cross-checked against the Strategic Plan's own description of the Digital Era pillar, DIRA's real service lines are:

1. **Institutional Websites & Platforms**: the pillar's primary service line today. Range from small nonprofit sites to large institutional platform builds. SHESA Connect is the largest completed engagement to date.
2. **Mobile Applications**: native and cross-platform builds, DHUB's own app being the clearest example of this capability in production.
3. **Secure Records & Verification Systems**: tamper-evident, audit-trailed systems for institutions handling sensitive records. **[MANDATORY]** Do not name DIRA ExamShield publicly anywhere on the site. List this capability only in generic terms: exam delivery, financial records, or verification data that must resist tampering and hold up under audit. No product name, no client name, no screenshots, no case study page. This is a live, sensitive government engagement and any public specificity works against it.
4. **Government Digitisation Platforms**: B2G platform work for ministries and public institutions. Keep case study language general unless a specific engagement is cleared for public reference.
5. **AI Subscription Products**: launching 2027, not yet live. **[OPEN]** Whether this appears on the site now as "coming soon" or waits until closer to launch is your call;

recommend waiting until there's a real product to point to, per the standing rule against publishing placeholder sections (see Section 6).

6. **DIRA Content Studio**: a production facility already operating, serving both internal Group content (TechFest coverage, DHUB product media) and paying external clients. This is real, live, revenue-generating, and currently has zero presence on diracmr.com. It needs its own page. See Section 5.

This is the structure to build the Services page around: six real lines tied to real work, not a generic six-box IT-shop template disconnected from anything DIRA has shipped.

---

3. Mandatory Corrections: Contact & Legal Information

The current live site and its sister properties show inconsistent, and in places simply wrong, information. Fix to the following, everywhere:

- **Email:** `info@diracmr.com`. Remove `diradigitalera@gmail.com` from diracmr.com and from foundation.diracmr.com. A personal Gmail address on an official contact page undermines the company's credibility on sight.
- **Phone:** `+237 682 366 472`. Remove `+237 679 66 70 32` from diracmr.com. Note that foundation.diracmr.com already has the correct number, only its email needs fixing.
- **Address:** AWICUL Building, Commercial Avenue, Bamenda, Northwest Region, Cameroon. Current site has a typo, "AWICCUL." Fix it.
- **RCCM:** RC.BDA.2026.B-000339. This does not currently appear anywhere on the site. Add it to the footer or a legal/about section, this is standard practice for a registered company and matters to any institutional visitor running due diligence.

---

4. Mandatory Fixes: Bugs Currently Live

These are functional defects a visitor can see right now. Confirmed live on the dates this audit was conducted.

- **Broken statistic counters** display "0%," "0," and "0%" on the About page, the Services page, and the Training page. The animation isn't rendering, and directly above these zeros, the section header reads "Numbers Don't Lie." Fix the counter, or replace with real, static figures: 1,000+ TechFest attendees, 108 people trained, 45 vendors hosted.

- **Fabricated testimonial photos** on the Training page pair real-sounding names with stock headshots pulled from a placeholder-image API. These are not real people. Replace with real, consented photos of actual trainees, or remove the section until real ones exist.
- **Duplicate service descriptions** on the Services page: three separate service cards (Database Architecture, UI/UX Design, Project Management) show the identical description text copied from the Cybersecurity card. Each needs its own copy.
- **Dead links:** every "Learn more" button on the Services page points to `#` and does nothing. The footer's "Services" link points to a URL that doesn't match the page's actual address. Three of four footer social icons are placeholder links going nowhere.
- **Empty portfolio page:** the page exists, has a working category filter, and contains zero projects. See Section 5.
- **Broken image paths on sister sites:** foundation.diracmr.com and cameryoungboyzfc.com both serve images through Windows-style backslash paths (`images\file.jpg` instead of `images/file.jpg`), which will render broken on standard web servers. Check every site built from the same template for this same defect.
- **Incorrect canonical tags:** dhubcmr.netlify.app and aswedo.org both have canonical tags pointing to placeholder or wrong domains left over from a template. This actively damages search indexing. Fix immediately on both.

---

5. Portfolio Rebuild

[MANDATORY] Rename the page from "Gallery" to **Portfolio** or **Projects**, both in the navigation label and the page's own title tag. **[OPEN]** Which of the two you use, or another name entirely, is your call, either reads as more conglomerate and less "creative developer portfolio" than the current label.

[MANDATORY] Build a standalone page for each real project below. Do not leave the portfolio page populated with placeholder or example content, an empty state with a working filter is worse than no page at all, it currently undercuts every other claim the site makes about DIRA's track record.

Confirmed real, live projects to feature:

- **DHUB**: the flagship product. Two DHUB properties currently exist and tell inconsistent versions of the same story (dhubweb.diracmr.com, the functional app

entry point, and dhubcmr.netlify.app, a fuller marketing site with the escrow and verification story told properly). **[OPEN]** Decide which becomes the primary linked destination and which becomes secondary, and make sure both footers credit and link back to diracmr.com, only one currently does.

- **SHESA Connect**: the pillar's largest completed engagement, a full membership platform with events, leadership, projects, and a gallery, live at shesaconnect.com.
- **ASWEDO Cameroon**: an NGO client platform, live at aswedo.org. Confirm internally whether this was delivered under DIRA's commercial arm or DIRA Foundation before deciding which portfolio it belongs in.
- **Camer Young Boyz FC**: a smaller web build, live at cameryoungboyzfc.com. Fine to include for range, not a lead piece.
- **The pan-African multi-vendor marketplace platform**: if under client confidentiality, present as a redacted case study: describe the problem and scale without naming the client.

[MANDATORY] Do not create a case study page for DIRA ExamShield. See Section 2, item 3.

[OPEN] Category structure, filter labels, and page layout (single long-scroll case study vs. tabbed sections, image-forward vs. text-forward) are yours to design. The one fixed requirement is that each project page includes real screenshots, a plain description of the problem solved, and a live link where one exists.

---

6. New Section: The DIRA Group

[MANDATORY] Add a section, page, or navigation grouping, your call on the exact mechanism, that makes DIRA's group structure visible. Right now diracmr.com links to none of DIRA's other live properties: not DHUB, not the Foundation, not TechFest. Someone landing on the main site cannot discover that any of them exist.

At minimum, this section links out to:

- **DHUB**: the housing marketplace
- **DIRA Foundation**: the philanthropic and pro-bono technology arm, live at foundation.diracmr.com, currently serving 15+ partner NGOs
- **DIRA TechFest**: the annual flagship event, live at diratechfest.diracmr.com, currently not linked from the main site's navigation at all despite being DIRA's single largest public credibility asset (1,000+ attendees, 108 trained, 45 vendors including

MTN Cameroon)

- **DIRA Content Studio**: see Section 7

[OPEN] Whether this lives as a dedicated page, a homepage section, or a mega-menu is your design decision. What's fixed is that all four are discoverable from the main site without the visitor already knowing they exist.

---

7. Content Studio Page

[MANDATORY] Build a dedicated page for DIRA Content Studio once there is real content to populate it with. It does not exist on the site today despite being a live, revenue-generating facility.

The page should cover, at minimum:

- What the Studio does: video production, podcast recording, branded social content, event coverage, professional headshots
- That it serves both internal Group content and external paying clients
- Real sample work once available

[OPEN] Whether this launches immediately with placeholder-free minimal content or waits until a fuller media library is ready is a judgment call, apply the same standing rule as everywhere else on this site: an empty or thin section is worse than no section. Don't publish it until there's enough real material to justify the page.

---

8. Mission Statement

[MANDATORY] The site currently has no mission statement anywhere. The About page's "Our Story" section is three generic value labels (Innovation, Partnership, Growth) with no connection to DIRA specifically and no reference to the Group structure, the founding story, or the actual work delivered to date.

Add a real mission statement to the About page, grounded in what the Strategic Plan and the site's own confirmed track record actually support: DIRA builds the digital infrastructure institutions and businesses run on, from Bamenda, and extends that same capability to the community through DIRA Foundation.

[OPEN] Exact wording, placement, and supporting visual treatment are yours to develop. The fixed requirement is that a mission statement exists, is specific to DIRA,

and is not interchangeable with any other small tech company's about page.

---

9. About Us, Full Rebuild

Beyond the mission statement, the About page currently has:

- **[MANDATORY]** A stock photo from Unsplash on a page called "About Us." Replace with a real DIRA photo, team or workspace.
- **[MANDATORY]** No mention of the founder, the team, DIRA TechFest, the Group's OHADA registration, or its institutional recognition (commendation from the MINRESI Regional Delegate, recognition from MINPMEESA, work presented directly to Minister Delegates at MINEPAT and MINREX). All of this is real, documented, and currently invisible on the company's own website.
- **[OPEN]** How much of the ten-pillar Group structure to surface here versus reserving for the new Group section (Section 6) is a layout decision. Recommend a short summary here with a link through to the fuller Group page, but the split is yours to design.

---

10. SEO and Technical Requirements

[MANDATORY]

- Generate or verify `sitemap.xml` covering every real, live URL on diracmr.com, including the new portfolio, group, and content studio pages once built. Submit to Google Search Console.
- Verify `robots.txt` exists and isn't blocking anything it shouldn't.
- Fix the canonical tag errors on dhubcmr.netlify.app and aswedo.org (Section 4).
- Set a real favicon and Open Graph image sitewide, per-page where practical. Confirm `og:title`, `og:description`, and `og:image` render correctly when a diracmr.com link is shared on WhatsApp or LinkedIn, this is the actual channel the link is currently being shared through.
- Add descriptive alt text to every image. Current filenames (`IMG_9933.jpg`) suggest this hasn't been done.
- Rename image files to descriptive, hyphenated names before upload.

- Compress and appropriately size all images, current photos appear to be unprocessed camera exports.
- Consider `Organization` structured data (name, logo, address, RCCM as registration ID, sameAs links to verified social profiles) so search engines and AI answer systems correctly identify DIRA as a real, registered entity.

[OPEN] Implementation approach, tooling, and exact schema structure are yours.

---

11. Confidentiality Note

The Strategic Plan and Operational Plan supplied for this brief are classified internally as confidential. Some figures in those documents, specific contract values, pricing structures, and details of active government negotiations, must not appear on the public website in any form, including in a way a determined reader could reverse-engineer from portfolio descriptions. If you're ever unsure whether a piece of information is safe to publish, ask before publishing it.

---

12. Priority Order

1. Brand name correction (Section 0) and contact information (Section 3), both touch every page and should happen first.
2. Bug fixes (Section 4), these are visible to every current visitor.
3. Portfolio rebuild (Section 5) and the Group section (Section 6), the two changes that do the most to correct the "solo agency" impression.
4. Services page rewrite around the six real service lines (Section 2), with ExamShield excluded per Section 2.
5. Mission statement and About page rebuild (Sections 8–9).
6. Content Studio page (Section 7), once material is ready.
7. SEO and technical pass (Section 10), last, so tags and structured data reflect the finished content rather than needing redone.
